Recording script: RoomDrop demo

Target 3:32 · hard limit under 4:00

Team Triple-8 · presenter: Pete · live app (mobile view): https://hotel-price-hunter-2qbcpylngq-as.a.run.app/

Recording tips

- Record a phone-size browser window (DevTools device mode, ~390 × 844) or the phone screen itself
- Use OBS: one scene for the app window, one for the deck PDF (page 7) for section 6
- Do one dry run first so Gemini is warm and the booking page is loaded
- Speak slowly, about 150 words a minute. Pause at each full stop
- Scroll slowly and let every card sit still for about 1 s
- Keep it under 4:00. If you run long, trim section 6 first
- Upload to YouTube as Unlisted, then run set_video_link.py with the URL

Timing summary

#	Section	Window	Length	Words	Est.
1	Hook	0:00-0:24	24 s	62	25 s
2	Three ranked drops	0:24-1:07	43 s	95	38 s
3	Peek at a drop	1:07-1:34	27 s	66	26 s
4	Ask Gemini	1:34-2:16	42 s	94	38 s
5	Consent and confirm	2:16-2:42	26 s	66	26 s
6	Architecture	2:42-3:14	32 s	64	26 s
7	Close	3:14-3:32	18 s	35	14 s
	Total	**0:00-3:32**	**212 s**	**482**	**3:13**

Est. = spoken time at 150 wpm. About 482 words, roughly 3:13 at 150 wpm. The rest of the 3:32 is room for scrolling, the Gemini wait and the slide switch.

1 Hook

0:00-0:24 24 s

ON SCREEN

1. Before recording: open the app in the phone-size window and let the booking page finish loading.
2. Hold on the booking ticket: Impiana KLCC Hotel, 21-22 Jan, AED 506.93.
3. Don't scroll yet. Let the hook land.

SAY

Most travellers book their hotel early, on a refundable rate, and never look at it again. But prices move. The same room, or a better one, often gets cheaper later, and nobody tells you. We're team Triple-8, and this is RoomDrop: a hotel agent that keeps re-shopping your booking until the stay, so you can book early and still catch the drop.

62 words · about 25 s at 150 wpm · window 24 s › next: 2 Three ranked drops

2 Three ranked drops

0:24-1:07 43 s

ON SCREEN

1. Point at the booking ticket at the top (hotel, dates, AED 506.93).
2. Scroll slowly to drop 1, Best drop: -217.55, Superior Twin Plus, AED 289.38, Non-refundable flag.
3. Scroll to drop 2, More flexible: -7.82, free cancellation.
4. Scroll to drop 3: -207.34, Best Available Rate.
5. Pause on the Non-refundable flag.

SAY

This is the live prototype, running on Cloud Run, and designed mobile first. At the top is my booking: Impiana KLCC Hotel in Kuala Lumpur, one night, at AED 507. Below it, RoomDrop has re-shopped the stay against live supplier rates through the Altovo gateway, and ranked three drops. The best drop is a Superior Twin Plus at AED 289, saving AED 217.55. Next is the more flexible option, with free cancellation. And a third, on a best available rate. Every card is honest about the catch: non-refundable rates are flagged before you tap anything.

95 words · about 38 s at 150 wpm · window 43 s › next: 3 Peek at a drop

3 Peek at a drop

1:07-1:34 27 s

ON SCREEN

1. Scroll back to the Best drop and tap 'Peek at this drop'.
2. Show 'Your price breakdown': You paid, New stay, Fees (to be checked), Your drop.
3. Scroll to 'What changes': room, breakfast, Non-refundable.

SAY

Let's peek at the best drop. The price breakdown compares my current booking with the new stay, and marks fees as still to be checked, so the saving is an estimate, not a promise. The What changes panel lines up hotel, room, meals and cancellation. Same hotel, a different room, breakfast included, but this rate is non-refundable. That's the trade-off a traveller actually needs to see.

66 words · about 26 s at 150 wpm · window 27 s › next: 4 Ask Gemini

4 Ask Gemini

1:34-2:16 42 s

ON SCREEN

1. Tap 'Ask Gemini' (the ✦ button).
2. In 'Ask about your options', type: Should I switch to the cheapest drop? What flexibility do I lose?
3. Tap Send. Keep talking while Gemini is weighing your options (~4 s).
4. When the reply appears, point at the key line: saving, non-refundable, are your dates firm?

SAY

So I'll ask Gemini: should I switch to the cheapest drop, and what flexibility do I lose? This goes to Gemini 3.8 Flash on Vertex AI. The prompt carries only the facts on this screen, and Gemini has to answer in a strict JSON schema. The server then re-validates every reply against those facts before it's shown, so Gemini can explain and weigh the options, but it can never invent a price. *(reply should be on screen now)* And here's the answer: it restates the estimated saving, warns that the rate is non-refundable, and asks whether my dates are firm.

94 words · about 38 s at 150 wpm · window 42 s › next: 5 Consent and confirm

5 Consent and confirm

2:16-2:42 26 s

ON SCREEN

1. Close the chat (✕, 'Close Gemini chat').
2. Tick: 'I understand this stay has no free cancellation…'
3. Tap 'Choose this drop'.
4. Hold on the confirmation: 'No reservation, cancellation, payment or refund was made.'

SAY

My dates are firm, so I'll take the deal. RoomDrop won't switch me to a less flexible rate silently. I tick that I accept the reduced cancellation flexibility, and that consent is recorded in Firestore. Then: choose this drop. The confirmation shows where I came from, where I'm going, and the estimated saving, and confirms that in this demo no reservation, cancellation or payment was made.

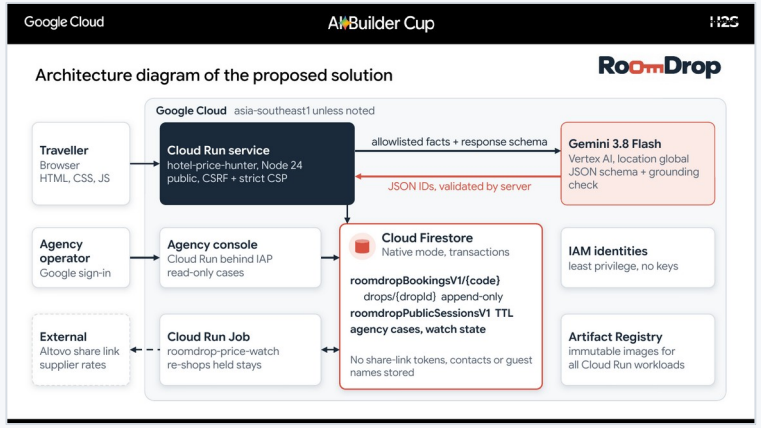

66 words · about 26 s at 150 wpm · window 26 s › next: 6 Architecture

6 Architecture

2:42-3:14 32 s

ON SCREEN

1. Switch to the deck PDF, page 7, full screen (an OBS scene works well).
2. Trace along it: Cloud Run, IAP console, Cloud Run Job, Firestore, Vertex AI.

Deck page 7: architecture

SAY

Under the hood, it's all Google Cloud. The app and API run as a Cloud Run service, with an IAP-protected agency console beside it, and a Cloud Run Job does the price watching. Cloud Firestore holds bookings, an append-only log of drops, consent records and sessions, with transactions and TTL. Gemini on Vertex AI powers the advice, and we test against the Firebase emulator.

64 words · about 26 s at 150 wpm · window 32 s › next: 7 Close

7 Close

3:14-3:32 18 s

ON SCREEN

1. Switch back to the app (the confirmation screen, or scroll to the RoomDrop logo).
2. Say the tagline slowly.
3. Hold 2 s of silence, then stop recording.

SAY

RoomDrop gives travellers real savings without the worry of booking too early, and gives travel agencies new margin on bookings they already hold. **Book early. Still catch the drop.** Thanks for watching, from team Triple-8.
